#### REMARKS

The figures of births and deaths shown in this statement for the week ending the 7th January, 1950 relate to 130 towns with an estimated population of 16,052 thousands. The total number of towns is 224 and their population is 27,937 thousands. Thus 58% of the total number of towns representing 60% of the total population is covered in this statement. The numbers of births and deaths recorded in these towns were 10,032 and 5,901 representing birth and death rates of 31.3 and 18.4 per thousand of population respectively.

(A) Indian Provinces.—The data here relate to 104 towns with an estimated population of 13,610 thousands. Information for Madras, West Bengal, Bihar and Assam could not be included. The total number of towns is 192 and their population is 24,365 thousands. Thus 54% of the total number of towns representing 56% of the total population is covered. The numbers of births and deaths recorded in those towns were 8,569 and 5,038 representing birth and death rates of 32.7

and 19.2 per thousand of population respectively. The table, at the end gives the position by provinces.

No town recorded a high death rate of 50 or over per thousand of the population.

(B) Unions and States.—The data here relate to 26 towns with an estimated population of 3,042 thousands. The total number of towns is 32 and their population is 3,572 thousands. Thus 81% of the total number of towns representing 85% of the total population is covered. The numbers of births and deaths recorded in these towns were 1,463 and 863 representing birth and death rates of 28·3 and 14·8 per thousand of population respectively.

Rajkot in Saurashtra was the only town which had a high death rate of 60.5 per thousand of population and this high death rate was largely due to deaths from fevers and smallpox.
